Importing the SVG into GIMP

Important: SVG exports are not exactly the same size as the surface masks. To avoid misalignment between the SVG masks and Enfusion's surface mask, follow these steps in the exact order:

1. **Import the SVG into GIMP.**
2. Apply a **vertical mirror transformation** to the image.
3. **Resize the image** to match the exact dimensions of Enfusion's surface masks.

After completing these steps, you can continue working in GIMP without alignment issues.
